RAVI KUMAR

Python Full Stack Developer

Chennai, Tamil Nadu, India | +91 7339416522 | rk8026569@gmail.com
GitHub: https://github.com/Ravi-04-00 | LinkedIn: https://www.linkedin.com/in/ravi-kumar-04-00z/

PROFESSIONAL SUMMARY

Versatile Python Full Stack Developer with practical experience designing and developing end-to-end, database-driven web applications. Skilled in building server-side logic and RESTful APIs using Django and Django REST Framework, integrating relational PostgreSQL databases, and constructing responsive user interfaces with React.js and Bootstrap. Combines systematic analytical discipline from a scientific background with practical full-stack software engineering.

SKILLS

- **Backend & APIs:** Python, Django, Django REST Framework (DRF), RESTful APIs, JSON Serialization
- **Frontend Development:** React.js, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Responsive UI Design
- **Database Management:** PostgreSQL, Relational Data Modeling, CRUD Operations, Foreign Key Constraints
- **Architecture & Workflows:** Client-Server Architecture, Multi-Role Workflows, Component-Based UI
- **Tools & Version Control:** Git, GitHub, VS Code
- **Full-Stack Competencies:** End-to-End Web Development, Relational Schema Modeling, REST API Integration

PROJECTS

Food Ecosystem – Multi-Role Food Ordering Platform | Technologies: Python, Django, Django REST Framework, PostgreSQL, React.js, Bootstrap

- Developed an end-to-end multi-role web platform providing distinct operational interfaces for customers, restaurants, delivery partners, and administrators.
- Implemented relational PostgreSQL database models with foreign key constraints to systematically manage restaurant menus, customer orders, and delivery statuses.
- Built RESTful API endpoints using Django REST Framework to format, validate, and serialize structured JSON data between backend services and frontend views.
- Integrated responsive React.js frontend dashboards with backend endpoints, ensuring consistent functionality and performance across desktop and mobile devices.

Smart School Connect – School Communication Portal | Technologies: Python, Django, Django REST Framework, PostgreSQL, React.js, Bootstrap

- Built a centralized communication web portal to streamline the distribution of official announcements, administrative notices, and circulars between schools and parents.
- Designed relational PostgreSQL database models to systematically organize circulars, academic departments, and publishing dates with strict data integrity.
- Configured RESTful API endpoints to handle notice filtering by academic department and serve structured JSON responses to connected clients.
- Integrated React.js client interfaces with backend endpoints via asynchronous HTTP requests to retrieve and render notices without full-page reloads.

EDUCATION

Bachelor of Science (B.Sc.) in Botany | Graduated: 2025

Arignar Anna Government Arts College, Villupuram, Tamil Nadu, India

- **Technical Transition:** Transitioned into software engineering through disciplined self-study in full-stack architecture, Python programming, relational database design, and modern React.js frontend development.
